

A histogram showing the distribution of the 'data' variable. The x-axis is labeled 'data' and ranges from 0 to 7. The y-axis represents frequency, ranging from 0 to 10. The distribution is highly right-skewed, with a very high frequency (approximately 10) for the first bin (0-0.5). The frequency drops sharply for subsequent bins, with a small peak around 0.5-1.0 (frequency ~4). The distribution tapers off significantly as the value of 'data' increases, with most of the data concentrated in the first bin.
